

The Best Way to Secure Your Business, Lower Costs and Reduce Risk

- Affordable, enterprise-strength network security and management
- Automatic PCI DSS compliance
- Auto-population of PCI DSS Self-Assessment Questionnaires
- Secure, encrypted connections between business locations
- Internet usage and performance reports
- High availability, global redundancy, fast 3G/4G wireless backup connection
- Worry-free maintenance with automatic software and compliance policy updates
- Built-in private or guest Wi-Fi connectivity
- Content filtering
- A self-manage option
- Up to \$100,000 in breach protection

Businesses of all sizes have an obligation to protect the sensitive and confidential information entrusted to them. But doing so is difficult. The dynamic nature of business networks leaves them ever vulnerable. New devices connecting to the Internet, and equipment and software upgrades all introduce potential weaknesses. The fact is, most companies lack the resources to properly deploy security technologies and keep up with these ever-changing vulnerabilities much less maintain the round-the-clock vigilance necessary to thwart an attack. Until now, only the largest companies could afford the level of security needed to guard against today's savvy cybercriminals.

PhoenixSentry is a complete end-to-end managed security service designed specifically to protect sensitive data systems (payments, health records, personal information, etc) along with all other Internet traffic. As a cloud-based subscription service there is no need to invest in expensive equipment, software or additional personnel. We watch over your company day and night, monitoring all network activity and proactively addressing and removing threats in real time.

**You focus on growing your business.
We'll take care of protecting your network.**

Affordable Network Protection

No Upfront Costs. No Hidden Fees. Unlike other managed security services, with PhoenixSentry you're not wasting money on hardware that has to be upgraded every other year or on hidden fees. PhoenixSentry is delivered as a subscription service. Your company will be protected with the same high level of network security and management that the world's largest corporations and banks benefit from, but without the high cost and complexity. In fact, PhoenixSentry costs less than a cup of premium coffee per day!

PCI Level 1 Certified Protection

PhoenixSentry is the world's only PCI Level 1-Certified security service that doesn't require a private network connection. Because of our certification, you as a subscriber automatically meet your PCI DSS compliance criteria.

Furthermore, PhoenixSentry can automatically answer the PCI Self-Assessment Questionnaire (SAQ) to attest that you're continually meeting compliance requirements.

We Know Network Security

Network security is our business. It's what we do. What's more, we're backed by Phoenix Managed Networks; the company relied on by many of the largest blue-chip organizations in the world for their critical IT infrastructure.

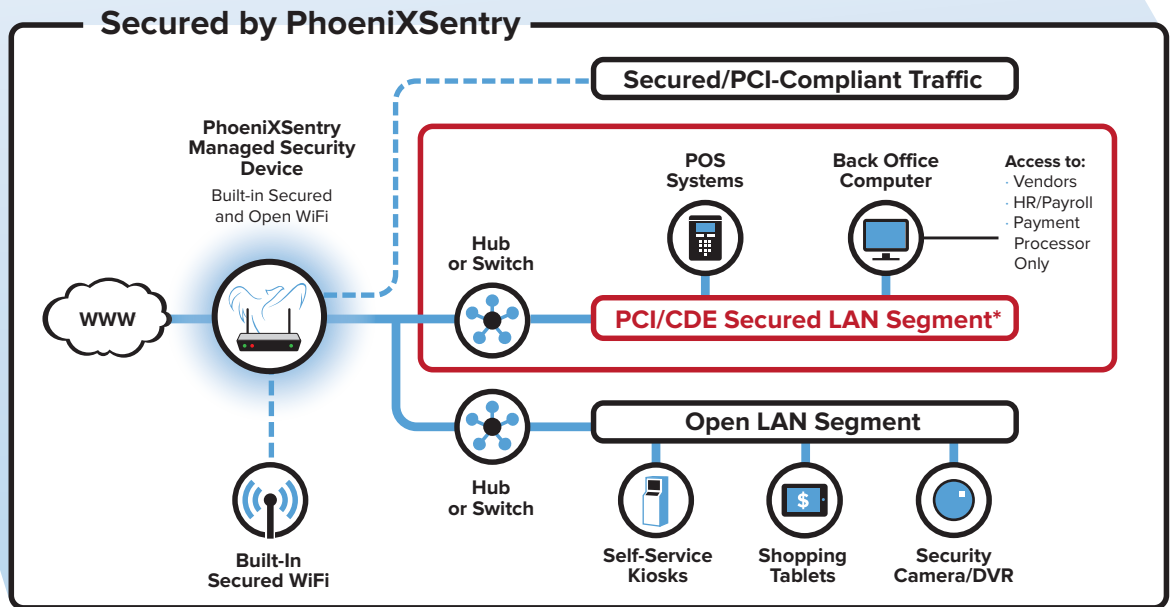

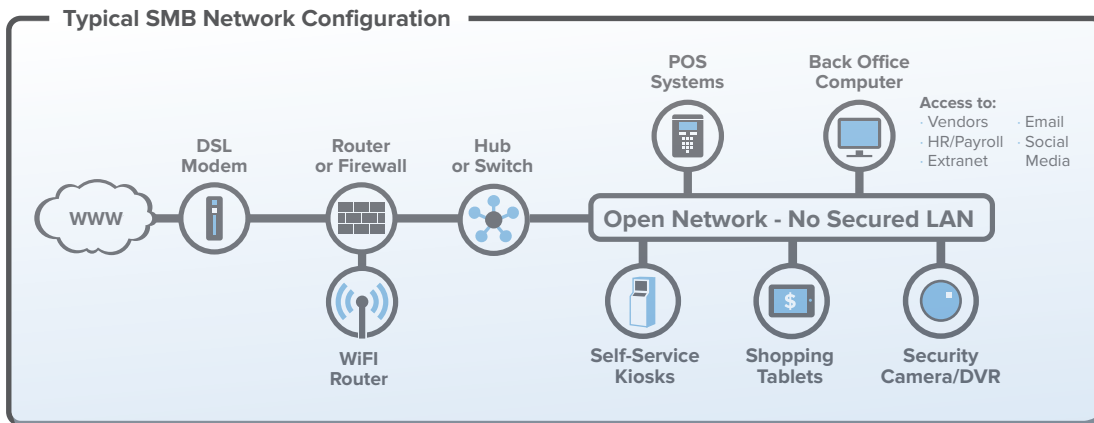

How PhoenixSentry Secures Your Business

Leveraging an award-winning security appliance that we supply, the device arrives on site already configured specifically for your Internet work flow and security demands. Once the unit goes live, all of your IT traffic is monitored and managed under strict rules and policies, ensuring your business remains secure and is meeting compliance mandates such as the PCI DSS, HIPAA and others. When combined with an optional third-party QSA Bundle, PhoenixSentry can help you address more than 97 percent of all PCI DSS obligations.

What Makes Us Different

Most companies cannot afford the security resources to maintain vigilance 24/7/365. As a stop-gap measure, most will install a router, firewall or other security device, set it up once and leave it to do its job. The problem is the dynamic nature of networks and Internet traffic requires constant monitoring and maintenance. In addition, off-the-shelf devices are not by default secure nor do they meet regulatory compliance standards. To make them so requires expensive resources and again, constant vigilance. PhoenixSentry was built from the ground up based on security best practices and PCI rules, so you benefit by having security and compliance out of the box!

*CDE = Card Data Environment as required under the PCI DSS mandate.

Every way you look at it, we've got your network secured.
